World Record Algorithm for everybody!

The Time Magazine listed our World Record Algorithm among the 50 best innovations worldwide in 2009. The world records were obtained on the largest mainframes at the time. But at present according to Moore's Law the calculations run on ordinary PC's

World Record Algorithm for everybody worldwide!

An important issue of the fair: Don't repeat the mistakes of the past! In particular the use of outdated optimization algorithms. For instance correctly optimized self-driving cars contribute to the reduction of traffic jams. Tour planning programs still do not satisfy important restrictions adding considerably to air pollution, not at least parcel services.

For our health the World Record Algorithm is of outstanding importance!

We just mention the field of tumor irradiation. Here we expect important progress in particular for the more complicated cases.

Die Cancer Patients certainly deserve the worldwide best optimization algorithm!!
